

## Learning Outcomes for Students in the Bachelor of Science in the Health Science Program at the University of Saint Joseph

The Health Science Program prepares all students to be able to:

1. **Identify** health determinants in order to improve equity and access across all populations
2. **Analyze** the impact that genetics, epidemiology, and nutrition have on individuals across the life span
3. **Integrate** the scientific foundations of disease and disability with clinical reasoning skills in order to enter a health related career
4. **Demonstrate** the ability to communicate and collaborate with interdisciplinary professionals
5. **Apply** knowledge from the natural, behavioral, social, and health sciences to be able to form preventative and wellness initiatives
6. **Develop** an understanding of professional ethics that can be applied in all healthcare professions
